FreedomEdge™

Syringe Infusion System

RMS Home Infusion has developed a compact infusion solution that's easy to use for smaller or often-repeated applications. It is so simple it makes frequent and flexible dosing a reality – in a safe, controlled manner. **Just close and go.**

Increased patient compliance with an easy and comfortable system

Easy-to-use equipment allows for quick training and operation. Simple operation lets users just close and go. Silent operation is convenient for patients.

Safer and more dependable than other infusion devices

Syringe is enclosed and protected within pump. Stays in place, ensuring a stable infusion with no interferences. Robust design has a long calibration-free life and is easy to clean.

Ideal for all users

Maximum simplicity means a design for all users, including but not limited to - small hands, limited dexterity and limited strength. Allows the patient to go from hospital care to home care with no interruptions in treatment.

Dynamic Equilibrium

Healthcare providers love the safety of continuous flow adjustment – the flow is sensitive to the patient's body and responds to pressure changes at the infusion site in real-time.

Go green

Use a system that is environmentally friendly. Dramatically reduce the use of materials and disposable plastic. Generate less hazardous waste and medical waste. No batteries or electricity needed.

Proven products you know and trust

Quality design, made in the USA, from a trusted leader in infusion technology.
